# Should Finance join the pilot?

More people who rated the agent said they liked it this week. Before you expand access, find out who rated it and what happened on requests nobody flagged.

# Count the people who stayed silent

Week A: **18 positive ratings out of 20** respondents, from 100 requests.

Week B: **10 out of 10**, also from 100.

What happened to the share of requests that received a rating?

# Read a sample outside the feedback inbox

Independent reviewers supported **18 of 20** sampled answers in week A and **14 of 20** in week B. Use both denominators. What can you decide with these samples, and what would you investigate next?

# Follow one complaint all the way back

Take F04. Preserve the original public reply, ask the data owner to accept a correction, and rerun E07. Try a different synthetic identifier in a fresh chat. Read the whole reply before closing the complaint.

# Give the operating decision a name and a date

Pick the team allowed to use this version. Name the person who can pause it, the previous version they would restore and the date of the next audit. List every critical failure that still blocks expansion.

# Show a colleague what you built

Start a fresh conversation. Show one approved metric, one decision you challenged and one correction that changed a later answer. Everything you need to keep working is in the **course GitHub repository**.
