3. Make your answer survive a fresh chat

A teammate opens a clean session and asks for last period’s activation.

“If your answer only works in your chat, it is not an answer yet.”

PRACTICUM · CLASSROOM SYNTHETIC DATA THROUGHOUT

WORKED EXAMPLE · CLASSROOM SYNTHETIC DATA

The same question, first without a window, then with evidence

“What was last period's activation?” Without a period, model or definition, a fresh chat guesses.

Field	Value	Annotation
Period	Mature cohort: [start date] to [end date]	Replace with the exercise’s actual dates.
Source	[approved model]	Name the approved model in proof.md.
Numerator	370 activated users	Count users, not attempts.
Denominator	1000 eligible signups	Use the same cohort.
Result	$370/1000 = 37.0\%$	Preserve both counts.
SQL	Saved in proof.md	Copyable, with evidence preserved.
Caveat	Classroom synthetic data	Recent cohorts are immature.
Decision owner	Acquisition lead	A named role, not an invented person.

Paras's Acquisition War Room is a real design pattern: headline, decomposition, independent benchmark, freshness, next investigation.

OBSERVABLE BEFORE AND AFTER · CLASSROOM SYNTHETIC DATA

370/1000 versus a stale note

370/1000

Activated users / eligible signups. Saved instruction + proof.md. No transcript.

Stale note	Repeatable instruction
Counts attempts but says “activation”	Counts activated users among eligible signups
Period is unstated	Mature period has explicit dates
Source is unstated	Approved model is named in proof.md
Fresh chat differs; cause is unclear	Fresh chat reproduces 370/1000

Paste only the instruction into a clean session. Compare its result with proof.md.

TIMED HANDS-ON BUILD · CLASSROOM SYNTHETIC DATA

Build the instruction and proof.md

3 min

Define

Fix the window and definition.

7 min

Write

Save instruction and evidence.

5 min

Test

Run in a clean chat.

15 MINUTES TOTAL · COPY AND COMPLETE

> Report last period's activation. Use the approved model [model name], the mature period [dates], data [table], and cite evidence.
> Return period, source, numerator, denominator, SQL, caveat, decision owner.

Open a fresh chat and run it.

KEEP ANSWERS OFF THIS CARD UNTIL DEBRIEF.

PEER CHALLENGE · NO ANSWERS UNTIL DEBRIEF

Reproduce or explain the mismatch

Swap proof.md only, no transcript. Your partner runs it in a clean session.

Compare the evidence

- Same period
- Same source
- Same numerator and denominator
- Same SQL

Name the cause

If the numbers differ, identify the window, definition, model, or freshness that changed.

Keep the classroom synthetic label attached.

“My result was ___; yours was ___; the difference is ___.”

EXIT ARTIFACT · LEAVE WITH PROOF

Submit the instruction and proof.md

Exit only when your partner can reproduce the result or explain the mismatch.

Required fields	What must survive the handoff
Period · Source	Explicit mature dates and the approved model
Numerator · Denominator	Both counts and what each counts
SQL	Copyable query
Caveat · Decision owner	Limits on interpretation and the accountable role
Evidence preserved · Synthetic label	Supporting evidence and “classroom synthetic data”

Send both files to your partner now. Record whether it matched. If it did not, record the cause.
