SESSION 8 OF 8 · 11 AM–NOON · SYNTHETIC CLASSROOM DATA ONLY

Operate a trusted data agent across teams

A full org pilot and monitoring lab: shadow, canary, rollback, ownership and feedback loop.

Minutes	Block	Type
0–10	Duties for Product Data, Engineering and Finance	Brief
10–25	Compare two synthetic pilot weeks; audit a sample	Exercise
25–40	Classify feedback; add one eval; rerun and version	Exercise
40–52	Close one item after proof; hold expansion with rollback criteria	Debrief
52–60	Demo and Monday pilot charter	Debrief

Three owners, three duties before any run

Owner	Duty in this pilot
Product Data	Defines the metric, its denominator and the feedback source.
Engineering	Runs shadow and canary; holds the rollback switch and the logs.
Finance	Checks the pilot cost and signs off any expansion spend.

EACH DUTY NEEDS ONE NAMED PERSON ON THE CHARTER (SLIDE 7)

Week B reads 100% positive at 10% coverage

Week	Requests	Ratings	Coverage	Positive share
Week A	100	20	20%	90% (18 of 20)
Week B	100	10	10%	100% (10 of 10)

Report sentiment with its coverage. Week B looks better only because 90% of its requests gave no rating.

SYNTHETIC LAB DATA · DENOMINATOR: 100 REQUESTS PER WEEK

10-25 · EXERCISE · INDEPENDENT RANDOM AUDIT, 20 CASES PER WEEK

Positive feedback alone would hide the decline

Week	Audited at random	Verified
Week A	20	18 of 20
Week B	20	14 of 20

Week B had 100% positive feedback, yet only 14 of 20 audited cases verified. Read the audit before the rating.

AUDIT IS A LAB SAMPLE · VERIFIED MEANS CHECKED AGAINST THE SOURCE RECORD

Classify the ticket, then add one eval

Step	Learner artifact
1 · Sample unflagged tickets	Sample list with ticket IDs
2 · Classify: definition drift, retrieval or routing	Labelled ticket table
3 · Add one failure to the evals	One eval case with its expected answer
4 · Propose a model or rule change	Change note; owner accepts in writing
5 · Rerun and version	Version label and before-and-after output

CITE OBSERVABLE OUTPUT, NOT INTENT

Close only after proof; hold expansion

Decision point	What you show
Close a feedback item	Only after the rerun passes the new eval and the audit sample is re-verified
Next-run behavior	The fresh run beside the old one, with the difference marked
Expansion	Hold. Keep the canary on the current team only.
Rollback criteria	Named in the charter before any expansion; one reversible switch

Monday pilot: hold expansion, reversible by one switch

Charter field	Your entry
Decision	One decision the pilot will test
Owners	Product Data · Engineering · Finance, one named person each
Scope	One team and one data source
Guardrails	Audit sample each week; rollback criteria from slide 6
Date	Monday pilot start
Reversible switch	Named switch that returns to the prior version

FIVE-LEVEL JOURNEY · TAKE YOUR ANALYST TO WORK

Start at chat; earn each level with proof

Chat	Individual	Team	Organization	Self-improving

Everything you need to keep working is in this repository.
