Could a colleague run this without you?

Growth wants a number for Monday. Give a colleague the files and close your chat. If they count different accounts, find the first instruction that left them guessing.

Which week was 'last period'?

Open the CSV. You'll find 'before' and 'after'. Can you put dates on either one? Write a caption Growth could publish and say which accounts had seven days to activate.

Show your work on one page

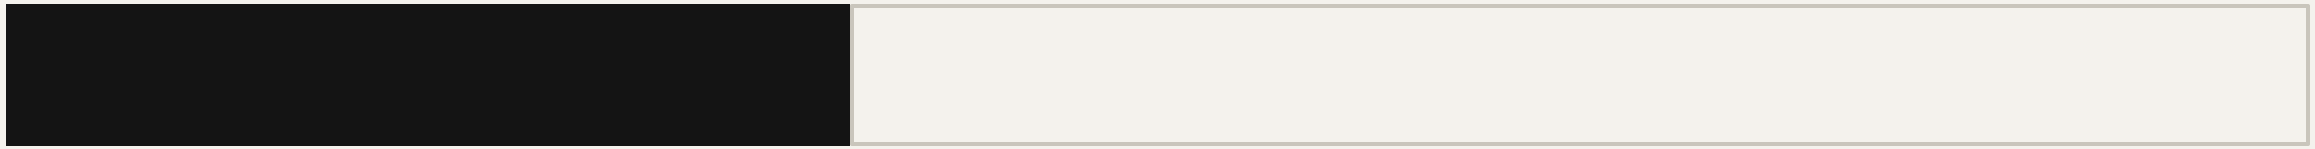

The Growth lead needs to decide where to investigate the signup decline. Paid-search tags changed between weeks. Ask Analytics to reclassify the same visits under both tag versions. If the gap survives, inspect the mobile landing page. Leave budget alone while the comparison is unresolved.

Give your colleague three files

Share activation.csv, model.json and workflow.md. Keep proof.md to yourself until the second analyst writes down the result. A clean conversation works for solo practice.

Compare the two answers

370 of 1,000

Did your colleague count 370 of 1,000 eligible accounts? If the results differ, compare source, period and denominator. Change the workflow where the two analysts had to guess.
