Close the conversation that produced your analysis

Growth wants to publish the after-period rate in Monday's review. A colleague must reproduce your counts without your chat. If their population or period differs, hold the number and repair the instructions.

What does ‘last period’ mean here?

The CSV labels its periods before and after. It gives no calendar dates. Write the period you actually used and what the seven-day follow-up covers.

Show your work on one page

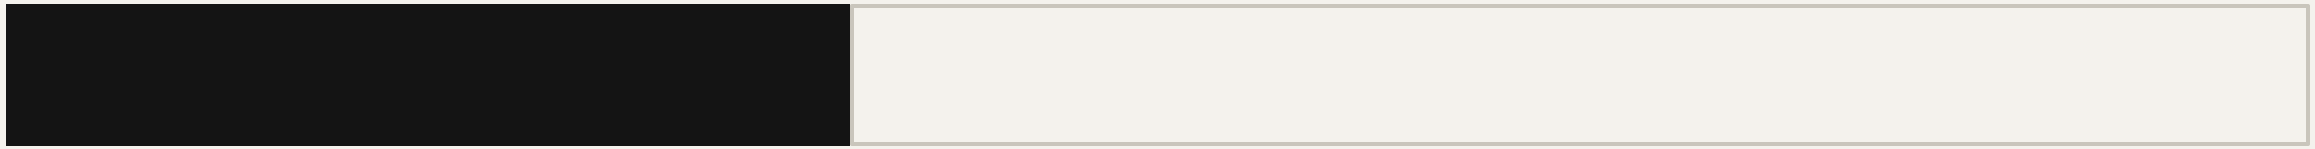
The Growth lead needs to decide where to investigate the signup decline. Paid-search tags changed between weeks. Ask Analytics to reclassify the same visits under both tag versions. If the gap survives, inspect the mobile landing page. Leave budget alone while the comparison is unresolved.

Give your colleague three files

Share activation.csv, model.json and workflow.md. Keep proof.md to yourself until the second analyst writes down the result. A clean conversation works for solo practice.

Compare the two answers

370 of 1,000



Did your colleague count 370 of 1,000 eligible accounts? If the results differ, compare source, period and denominator. Change the workflow where the two analysts had to guess.
